Brian Woodcock Beer and Baked Cheese Mac N' are a match made in culinary paradise. Advertising - Continue reading below Harvests: 8 servings Prep Time: 0 hours 20 minutes Cook Time: 0 hours 25 minutes Total time: 0 hours 45 minutes 1 (16-ounce) packet of short pasta 1/4 c. (1/2 sticks) unmarked butter 1 shallot, chopped 1 clove garlic, chopped all-purpose flour 1/4 teaspoon cayenne pepper 1 c. Anchor Steamed beer 2 c. half and a half 2 tsp. Dijon mustard 8 ounces. Havarti cheese, grated (about 2 cups) 8 ounces extra-spicy Cheddar cheese, grated (about 2 cups), separated kosher salt and freshly ground black pepper This ingredient is created and maintained by a third party, and is imported on this page. You can find more information about this and similar content on your website. Cook the pasta according to the direction of the packaging until al dente. Drain. Preheat the oven to 425 degrees Fahrenheit. Melt the butter in a large frying pan over a medium heat. Add the shallots and garlic and cook until golden, 2 to 4 minutes. Whisk in the flour and cayenne pepper and cook for 1 minute. Gradually whisk the beer and cook for 1 minute. Whisk half and a half and mustard. Bring to a boil and cook until thickened, 1 to 2 minutes. Reduce heat to low and simmer, whisking from time to time, 5 minutes. Remove from heat and whisk in Havarti and 1 cup of cheddar until smooth. Season with salt and black pepper. Fold the pasta. Transfer the mixture to a 3-quart baking dish. Sprinkle with the remaining cheddar. Bake until golden brown, 15 to 20 minutes. Allow to stand for 5 minutes before serving. After gamers found evidence that Valve could bring some of its wildly successful gaming products to the Mac, and Valve teased as much last week, we now have official confirmation. Valve is coming to the Mac in a big way. In a press release on Monday, Valve announced that Steam, its Source game engine, and a number of its most popular titles will be available on Mac in April. Selected from the Valve library that will be available at launch include Left 4 Dead 2, Team Fortress 2, Counter-Strike, Portal and The Half Life series. Valve also announced that gaming licenses can disrupt the platform, so any game you purchased for a PC will also work as soon as it comes to the Mac, at no extra cost. Valve will bring Steam, its wildly popular Windows gaming market, to Mac as well, and it sounds like third-party publishers on board: Our Steam Partners, which deliver over a thousand games to 25 million Steam customers, are very excited support for Mac, said Jason Holtman, director of business development at Valve. Steamworks for Mac supports all API versions of Steamworks, and we've added a new feature called Steam Play that allows customers who product for Mac or Windows to play on another platform for free. For example, Steam Play, in conjunction with Steam Cloud, allows a gamer, playing on their work computer, to return home and pick up the game in the same game at the same point on their home Mac. We expect most developers and publishers to use Steam Play. This should be great news for Mac gamers who are used to using Boot Camp or building a completely separate Windows PC. Valve notes that they specifically wanted to go with local development solutions, not just emulation, which rarely gives much experience. The company also confirmed that its upcoming sequel portal 2 will be its first official simultaneous release for Mac OS X and Windows. This story, Valve: Steam, a game that arrived on a Mac in April was originally published by Macworld. Macs Fan Control is a utility that tracks the temperature and speed of a Mac fan. The app does not stop there. It also provides monitoring capabilities and the ability to control fan speed to the desired RPM. Macs Fan Control provides what only Apple developers have possessed in the past: the ability to control how Mac cooling fans perform. This is not something that should be taken in the light. Misuse of this app (or similar apps) can damage your Mac. Apple used advanced thermal modeling to come up with cooling profiles used in their fan control systems. Macs Fan Control can replace the Apple fan profile provided with the one you create. It's more focused on intermediate and advanced Mac users than beginners. This does not mean that if you are a beginner you should not use it, only that you have to be careful with it. Coyote Moon, Inc. there are two main reasons for creating a custom fan profile: You have replaced the component in your Mac (such as drives or graphics cards), and old temperature sensors have been damaged or no longer measure the temperature correctly. Use Macs Fan Control to set a fan speed limit to prevent the fan from turning away for what is needed. Your Mac is used in particularly noise-sensitive environments (such as a recording studio). While you can usually use fan control by default, there are a few short periods of time when you need to silence your Mac, preventing fans from spinning beyond the predetermined limit. You don't need to use the Macs Fan Control function to evaluate this utility. You can use the app to monitor the temperature sensors in your Mac, and the speed of the associated fan RPM (Revolutions per minute). No matter how you use this app, the controls and layout are easy to use and navigate. Two glasses are used in the main window. The first shows the fans in your Mac and the speed of the fan. There is also a control section where you can create custom settings for each fan. Second Second shows the temperature of each thermal sensor in the Mac. This uncluttered and simple interface displays the relevant information you need at a glance. To take control of the fan, click the Custom button next to the desired fan to display the fan control panel. Then you can choose how to control the fan: Permanent RPM: You install RPM manually. The fan rotates at the right speed regardless of temperature or sensor value. Sensor-based value: You choose a sensor to use. You then determine the low temperature where the fan speed will increase, and the high temperature where the fan is set to maximum RPM. To go back to the default settings for a particular fan, select the Auto button. Macs Fan Control can also be displayed in the menu bar. The menu bar shows a representation of the chosen sensor temperature and the selected fan speed. You can also use a black-and-white icon or color icon for the Macs Fan Control menu item. One of the features that can be added is the ability to add event thresholds that will generate notifications and change the color of the menu bar display to get your attention. Macs Fan Control is available for all types of Macs, including MacBook and iMac. The app is also available in the Windows version for those who use Boot Camp to run the Windows environment on Mac. If you need an extra layer of control over your Mac's cooling capabilities or want to see how hot your Mac is getting, Macs Fan Control can be the app you need. Craig Brewer Updated September 22, 2017 Internet accessActive email accountCredit card or PayPal account Steam is a video game download service for users of personal computers. The service allows you to purchase both the latest releases and old classics, as well as receive any updates as they are updated. However, you need to create a gamer account to get started with Steam. Go to the Steam website below and click on the Get Steam Now button. This will allow you to download and install a Steam client on your computer. Click Save now in the box that appears and write down the location on the hard drive where the file is stored. Please note that Internet Explorer will open this file automatically, while other web browsers will not. Find the stored file and click on it to start the installation program if it's not installed automatically. Enter the personal information requested by the program. It will ask for your payment information here, but please note that you will not pay at all until you order the actual game. There are no fees just for signing up for Steam.Create username. Note that other players will see this name when you play the game online, so choose something like and anonymously to protect your real identity. Before you complete the entry of all the information, go to the Privacy section. Be sure to click the Hide personal information button so that other Steam users don't see your real name and email address. You can share this with the friends you have online, but it's wisely wise hide this information from the beginning, as there have been problems in the past with user privacy violations. Click GOOD and start browsing through a wide catalog of available games. You can purchase any game on your information page, and the download will start immediately. Your Steam account can keep a list of friends or other gamers you've met and enjoyed. Only add friends to your account if you are comfortable contacting anytime you download a Steam client as everyone on your friends list will be alerted when you come online.
